राहुल कुमार,

Rahul Kumar.

जन्म तिथि/ DOB: 26/04/2003

पुरुष / MALE

8493 7718 3673

मेरा आधार, मेरी पहचान

PATIENT DETAILS	NAME: Mr. RAHUL KUMAR	CLIENT DETAILS	CLIENT NAME: HPD01472	REPORT DETAILS	Barcode No.: 8230299
	Age/Gender: 20 Y/Male		CLIENT Address: HAJIPUR		Collected ON: 22/Jul/2026 09:54PM
	Lab NO: 052607220309		Ref Lab/Hospital.: Self @1		Received ON: 22/Jul/2026 09:55PM
	Referred BY: Dr. S DAS MD				Reported ON: 23/Jul/2026 02:07PM

Test Name	Result	Unit	Biological Ref.Interval	Method
HIV 4th Gen (HIV 1&2 and P24 Antigen)	743.90	COI	Non Reactive: <0.90 Border Line: 0.90-0.99 Reactive: >=1.00	ECLIA

Sample Type:Serum

Comment :

Non reactive result implies that antibodies to HIV 1&2 have not been detected in the sample. This means the patient has either not been exposed to HIV 1&2 infection or the sample has been tested during the "window phase" i.e. before development of detectable level of antibodies. Hence a Non Reactive result does not exclude the possibility of exposure or infection with HIV 1&2.

Note :

- This is a screening test result may be confirmed by another methods if indicated.
- Results to be clinically correlated.
- Rarely false negative / positive may occur.

AS PER NACO GUIDE LINE : ELISA – POSITIVE (ELISA VALUE : 0.872, CUTOFF VALUE:0.490), IMMUNOCHROMATOGRAPHY - REACTIVE. PLEASE CORRELATE CLINICALLY

Hepatitis C Virus Antibody 3rd Gen (HCV)	133.90	COI	Non Reactive < 0.89 Borderline 0.90 - 0.99 Reactive >= 1.00	ECLIA
--	--------	-----	---	-------

Sample Type:Serum

Comment :

Hepatitis C (HCV) is an RNA virus of Flavivirus group transmitted via blood transfusions, transplantation, injection drug users, accidental needle punctures in healthcare workers, dialysis patients and rarely from mother to infant. 10% of new cases show sexual transmission. As compared to HAV & HBV, chronic infection with HCV occurs in 85% of infected individuals. In high risk populations, the predictive value of Anti HCV for HCV infection is >99% whereas in low risk populations it is only 25%

Note :

- It is a screening test result may be confirmed by another methods if indicated .
- To be correlated clinically.
- False positive results are seen in Autoimmune diseases, Rheumatoid factor, Hypergammaglobulinemia, Paraproteinemia, passive antibody transfer, Anti-idiotypes & Anti superoxide dismutase
- False negative results are seen in early Acute infection, Immunosuppression & Immuno-incompetence.
- HCV RNA PCR recommended in all reactive results to differentiate between past and present infection

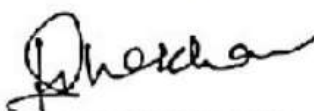

ELISA – POSITIVE (VALUE : 0.640, CUT OFF VALUE : 0.390), IMMUNOCHROMATOGRAPHY –REACTIVE, PLEASE CORRELATE CLINICALLY.

Test has been performed on ROCHE_COBAS_6000

For test performed on specimens received or collected from non-HPDPL locations, It is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point generation of the said specimen by the sender. HPDPL will be responsible only for the analytical part of test carried out. All other responsibility will be of referring Laboratory.
